How to Update the QUICKCHECK \textit{webline} Firmware

\textbf{NOTE}

This technical note describes how to update the firmware of your QUICKCHECK \textit{webline}. PTW recommends downloading the saved measurement data from your QUICKCHECK \textit{webline} to your PC before performing the update to the new firmware version.

1. Disconnect the power cable from your QUICKCHECK \textit{webline}.
2. Make sure the device is turned off.
3. Connect the QUICKCHECK \textit{webline} to your PC via RS232.
4. Start the \textit{QUICKCHECK\textit{webline Updater}} on your PC.
5. Reconnect the power cable to your QUICKCHECK \textit{webline}.
6. A message is displayed in the \textit{QUICKCHECK\textit{webline Updater}} window, informing you that a connection to the QUICKCHECK \textit{webline} has been established:

If the message is not displayed, try selecting a different COM port. Disconnect the power cable and turn off the QUICKCHECK \textit{webline}. Make sure the RS232 connection between your PC and the device is established. Reconnect the power cable.

7. Click \textit{OK}.
8. A new message is displayed in the \textit{QUICKCHECK\textit{webline Updater}} window, informing you that the update procedure is irreversible. Confirm that you wish to start the updating process by clicking the \textit{Start update} button.
9. The QUICKCHECK webline firmware will be updated. Do not close the **QUICKCHECK webline Updater** window.

10. Once the update is complete, the message **Update successful** is displayed in the **QUICKCHECK webline Updater** window.
