NOTICE
This technical note describes how to update the firmware of your QUICKCHECK webline.
PTW recommends downloading the saved measurement data from your QUICKCHECK webline to your PC before performing the update to the new firmware version.

1. Disconnect the power cable from your QUICKCHECK webline.
2. Make sure the device is turned off.
3. Connect the QUICKCHECK webline to your PC via RS232.
4. Start the QUICKCHECKwebline Updater on your PC.
5. Reconnect the power cable to your QUICKCHECK webline.
6. A message is displayed in the QUICKCHECKwebline Updater window, informing you that a connection to the QUICKCHECK webline has been established:
7. Follow the prompts in the dialog QUICKCHECKwebline Updater window.
8. The QUICKCHECK webline firmware will be updated. Do not close the QUICKCHECKwebline Updater window.
9. Once the update is complete, the message Update successful is displayed in the QUICKCHECKwebline Updater window.
10. Click the Finish button to close the window. Your QUICKCHECK webline firmware has been successfully updated.
