

PTW Environmental Policy

We acknowledge the responsibility our business activities carry for the environment. Therefore, we are committed to using resources as efficiently as possible, reducing negative environmental impacts, and continuously improving our environmental performance. Our environmental policy is guided by the requirements of the Environmental Management System in accordance with EMAS (Eco-Management and Audit Scheme) and is an integral part of our corporate strategy.

We are committed to complying with all applicable environmental legislation, regulatory requirements, and voluntary commitments, and we strive for the continual improvement of our environmental management system. To achieve this, we regularly review and optimize our processes in order to use resources more efficiently, minimize waste, promote recycling, and prevent or reduce adverse environmental impacts.

We are committed to the responsible use of energy and natural resources and aim to continuously reduce our energy consumption and the associated greenhouse gas emissions. We promote measures that improve energy efficiency, increase the use of renewable energy sources, and reduce climate-related environmental impacts. In addition, we consider the protection of biodiversity and ecosystems in our decisions and activities wherever relevant and feasible within the scope of our business operations.

We take relevant environmental aspects into account in our operational processes and continuously strengthen their early integration into product development, production, packaging, and logistics.

Our employees play an active role in shaping our environmental management system. Through training, workshops, and ongoing communication, we foster environmental awareness and encourage personal initiative. We communicate transparently about our environmental activities and publish our EMAS environmental statement on a regular basis.

Implementation of our environmental goals is coordinated by our sustainability team and embedded across all business areas. Executive management ensures effective application of this policy and provides the necessary resources. Department heads act as environmental management representatives, sharing relevant information internally and contributing feedback, ideas, and concerns to our continuous improvement process.

Through our EMAS-based management system, we embed ecological responsibility throughout our operations. Our goal is to continuously improve PTW's environmental performance, reduce negative environmental impacts wherever possible, and thereby help protect the natural foundations of life for current and future generations.
